Built a landing page with Html, Css, Javascript, and Bootstrap within 8hrs as requested by the client

Committed code to Github

Project was made with amazing transitions and well-sized images

The web page was made responsive for all screen sizes

PROJECTS

KaiserFinance | *React, Tailwind, Firebase*, ChartJs — May 2024

- Developed a mobile-only web app with React, Tailwind, Firebase.
- This Project was built to help track income and expenses and all details displayed on a chart with the help of chartJs
- Project was made for mobile view only
- Darkmode was implemented
- Imported a currency converter API to help get daily accurate currency conversion between naira and dollar
- Tested and ran the web app to detect bugs and all were fixed

Kanban Board | *CSS, React.js, SQLite React Drag and Drop* — August - September 2024

- Developed a task management kanban board
- Built it with React drag and drop feature to help users drag and drop tasks between todo, ongoing, and completed.
- Made use of the CURD API to connect to the backend built with node/express.js
- Provided a local database with SQLite to save tasks and their statuses.

BIO

I am a dedicated and detail-oriented entry-Level Frontend Web Developer with a solid foundation in HTML, CSS, and JavaScript, also proficient in technologies like React and Tailwind. I bring a creative approach to web development, evident in projects like the Todo-list web app and Atoms. I am eager to contribute my enthusiasm, adaptability, and evolving skill set to a dynamic development team.
